

Pre-Fabricated Poly Split Casings

Durable-Lightweight-**Strong**

The DLS Case™ split casing system is a unique design for fast and efficient installation of casing on existing pipelines. The casing system provides protection from pipeline movement, soil abrasions, or for leak identification. The patent pending alumi-joint connection ensures the reconnection of the top and bottom halves, giving the casing a strong joint, bringing back its original mono design. The open end design provides awareness of leaks inside the casing.

The Repaired Pipe Cased in Hours, Not Days
